

CORNEA COLD® VS OPTISOL-GS

A COMPARATIVE STUDY OF A NEW HYPOTHERMIC STORAGE MEDIUM USING A NOVEL METHOD TO CALCULATE THE OVERALL QUALITY OF THE CORNEA

90.1-95	3.75
95.1-100	4

OQ - Viable Endothelial Cell Density

$$V_M = \frac{(\%CM \times CA) + (\%PM \times PA)}{TA}$$

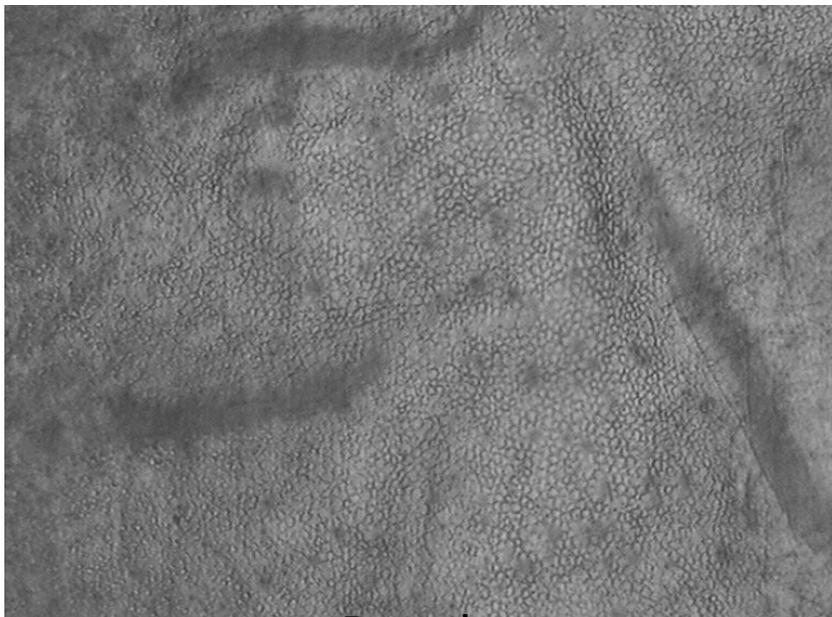

Where,
 CA = Optic zone
 PA = Outside optic zone

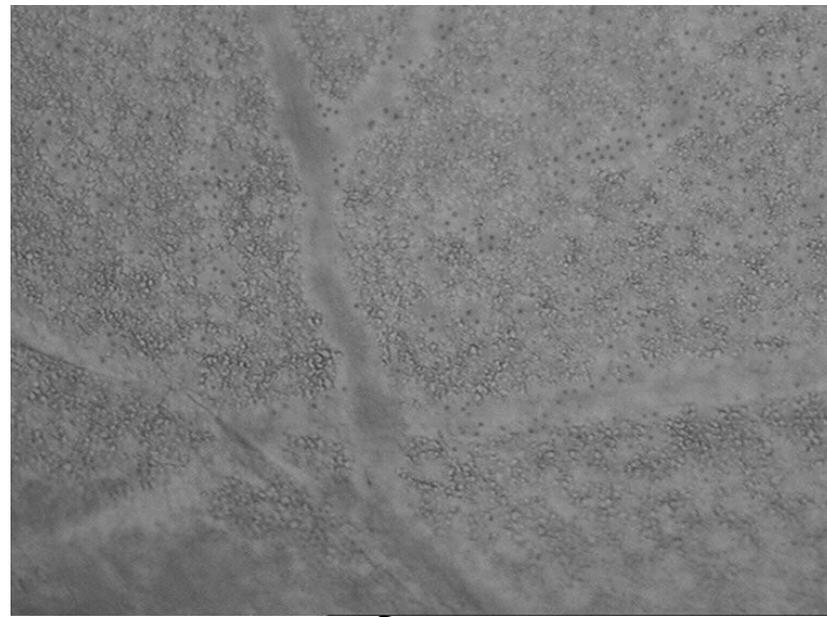

•Parekh, M., *et al.* A Simplified Technique for In situ Excision of Cornea and Evisceration of Retinal Tissue from Human Ocular Globe. *J. Vis. Exp.* (64), e3765, DOI: 10.3791/3765 (2012). [PMID: 22733120]

$$VECD = \frac{\left[\text{VisECD} - \frac{\text{VisECD} \times \left[\frac{(\%CM \times CA) + (\%PM \times PA)}{TA} \right]}{100} \right]}{1000 \text{ (for OQ)}}$$

OQ - Morphology

Regular

Severe

Parameter	Evaluation	Score
Morphology	Regular	4
<i>Intercellular Borders</i>	Regular - Mild	3.5
<i>Polymorphism</i>	Mild	3
<i>Dystrophy</i>	Mild - Moderate	2.5
<i>Degeneration</i>	Moderate	2
	Moderate - Severe	1.5
	Severe	1
	Severe - poor	0.5
	Poor	0

$$\text{Morphology} = \frac{\text{IB} + \text{P} + \text{Dy} + \text{De}}{4}$$

65.1-70	2.5
70.1-75	2.75
75.1-80	3
80.1-85	3.25
85.1-90	3.5
90.1-95	3.75
95.1-100	4

A) 50X: intact integrity with 50% mortality,

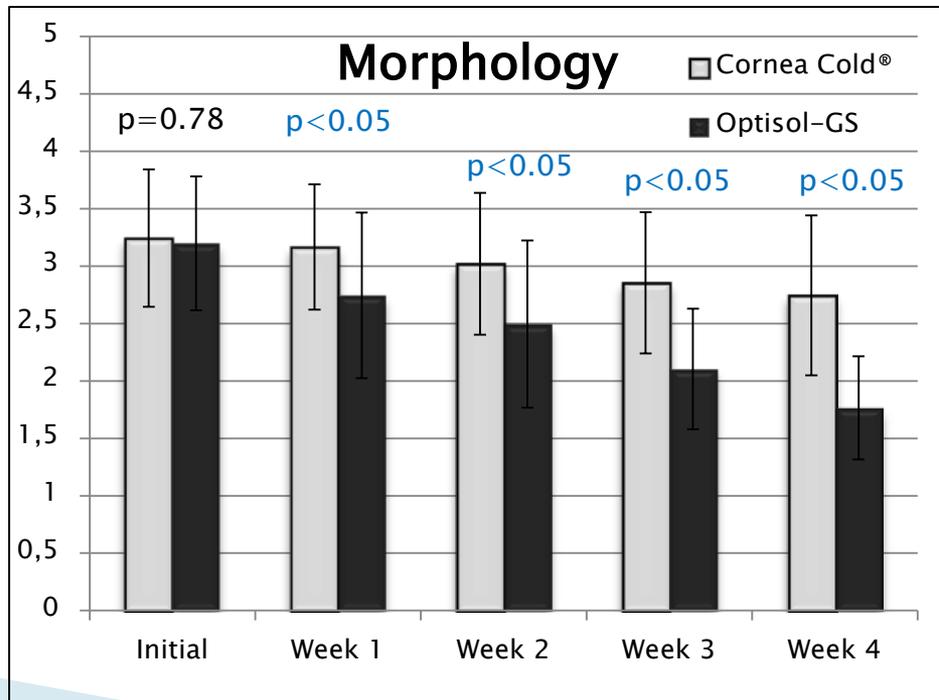

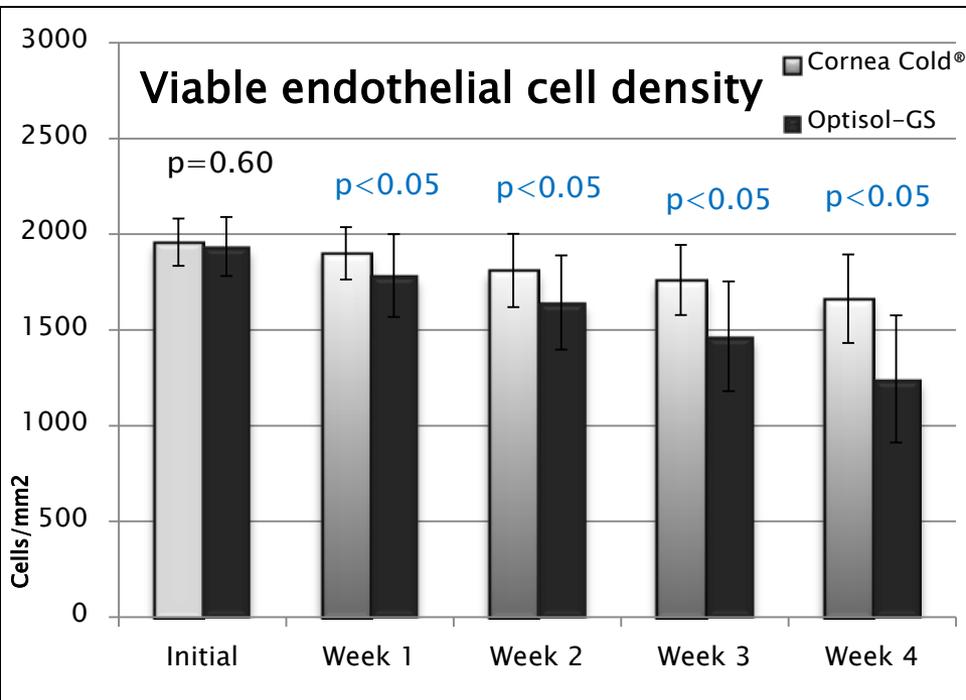

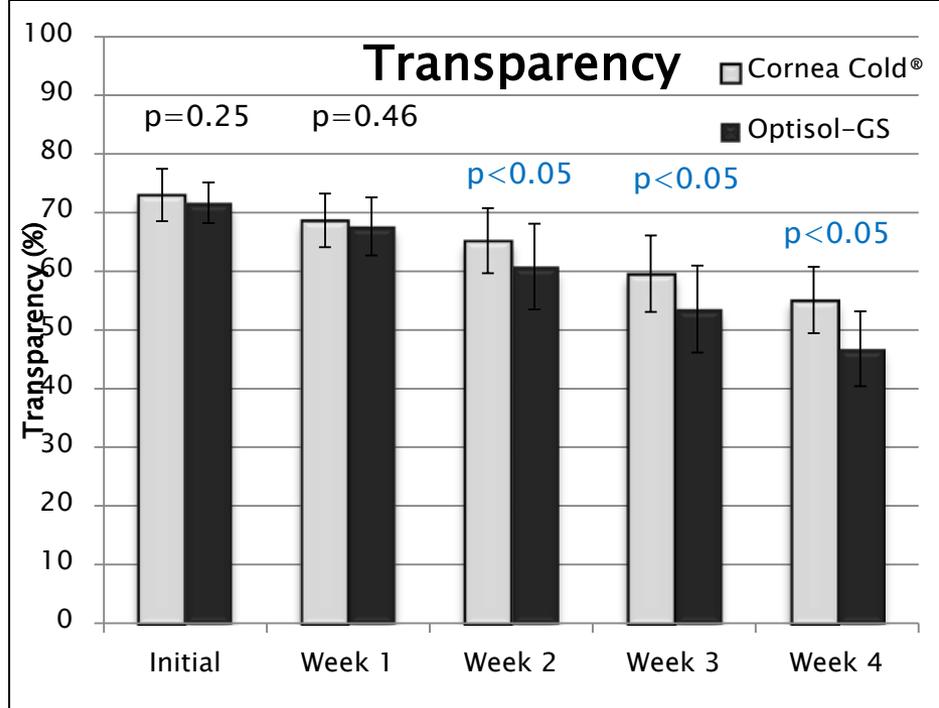

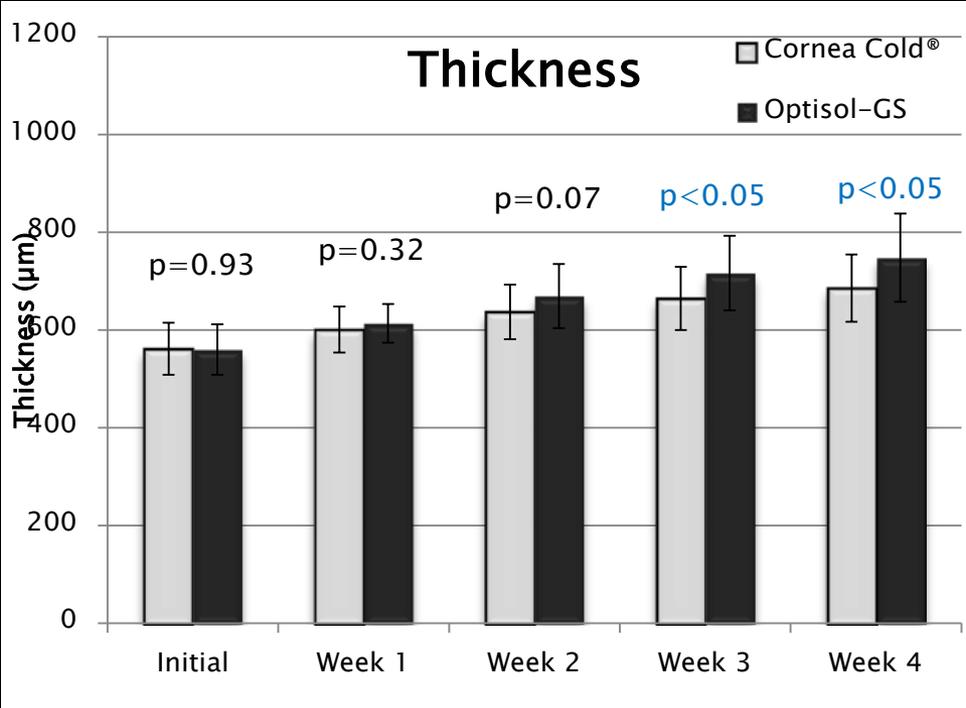

B) 200X: Regular – Mild morphology due to few cells not in the shape as the others,

C) 100X: the epithelial integrity is lost with 80% mortality,

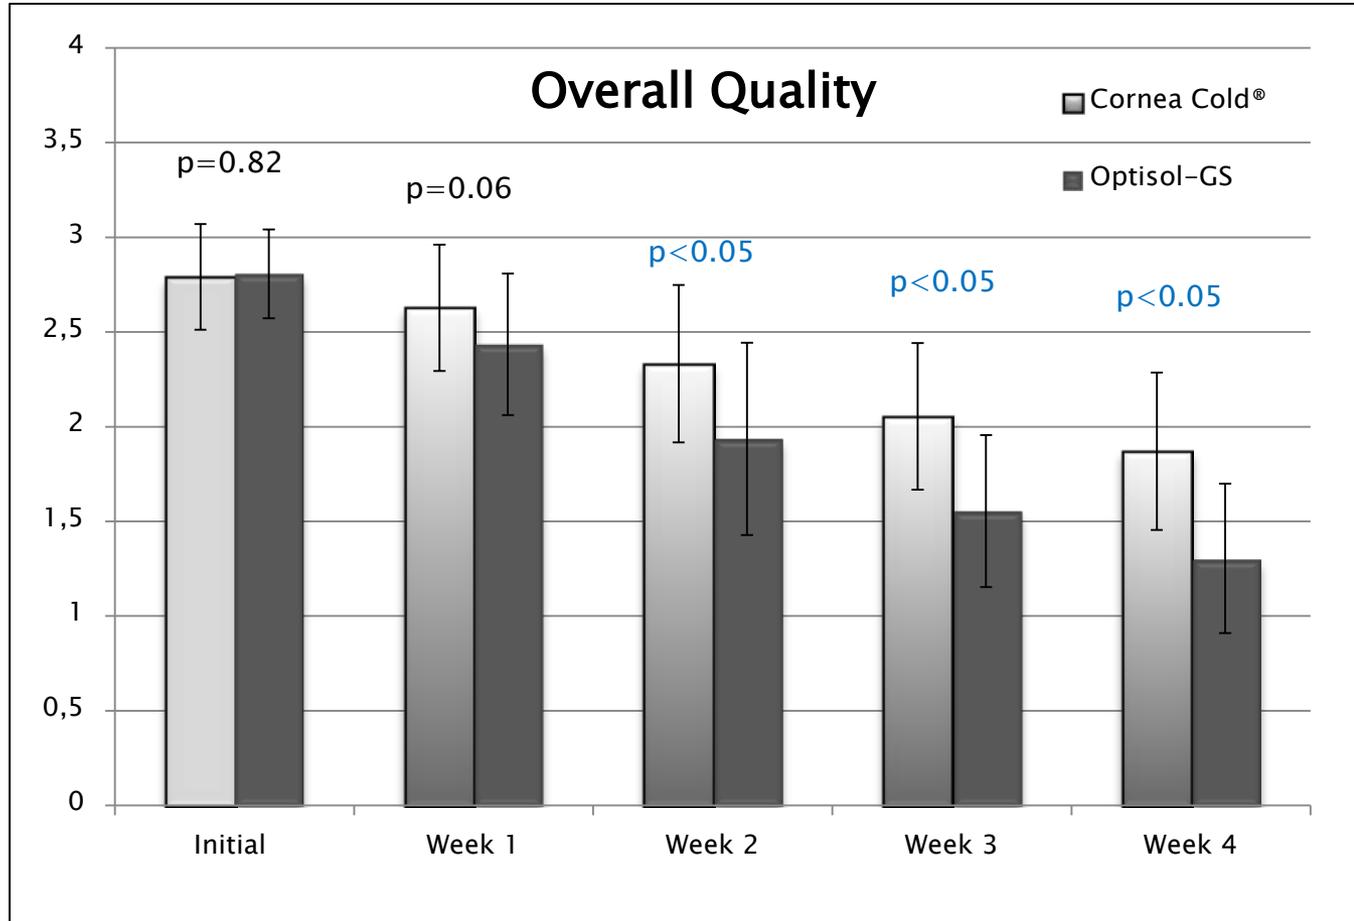

D) 50X: 40% cell integrity.

Cornea Cold® Vs Optisol-GS

- 24 pairs of human donor corneal tissues suitable for research
 - Interchange of right and left eye corneas equally
 - 4 phases – 1 open and 3 blinded (masked observers)
 - Data and analysis were obtained every 7th day up to 4 weeks
-

Take Home Message

- The parameters selected for determining the OQ can be used by the eye banks without changing their current protocols by using their standards and converting those subjective analysis into objective values as described.
 - Overall quality formula can be modified and used in the current eye banking protocols for increasing the value and standards of the donation and bio banking.
 - Cornea Cold[®] storage medium can preserve the donor corneal tissues for ≤ 21 days.
 - Longer preservation time can permit higher flexibility, evaluation accuracy, more effective surgical manipulation due to clarity and quality for corneal transplantation and ease of transportation.
 - Future prospects - to learn the clinical outcomes using Cornea Cold[®]
